ADULT Updated: April 23, 2024

# **Regimen Reference Order**

# BRST - pembrolizumab + BrighTNess (weekly CARBOplatin)

ARIA: BRST - [pemb + BrighTNess wkly Ph 1]
BRST - [pembro + BrighTNess Phase 2]
BRST - [pembro + BrighTNess Phase 3]

Planned Course: Phase 1: pembrolizumab every 42 days + PACLitaxel (weekly) + CARBOplatin (weekly)

for 4 cycles (1 cycle = 21 days)

Phase 2: pembrolizumab every 42 days + AC Dose Dense every 14 days for 4 cycles

(1 cycle = 14 days)

<u>Phase 3</u>: pembrolizumab every 42 days for 5 cycles (1 cycle = 42 days)

See Appendix (page 8) for regimen Dosing Schema

Indication for Use: Breast Cancer Neo-Adjuvant and Adjuvant; "Triple negative"

CVAD: Preferred (VESICANT INVOLVED)

# Proceed with treatment if:

Phase 1 (pembrolizumab + PACLitaxel + CARBOplatin)

• ANC equal to or greater than  $1 \times 10^9/L$  AND Platelets equal to or greater than  $100 \times 10^9/L$ 

- Total bilirubin less than 1.25 times upper limit of normal
- AST/ALT less than 3 times upper limit of normal
- Creatinine clearance greater than 30 mL/minute

Phase 2 (pembrolizumab + AC (Dose Dense))

- ANC equal to or greater than  $1 \times 10^9/L$  AND Platelets equal to or greater than  $100 \times 10^9/L$
- Total bilirubin less than upper limit of normal
- AST/ALT less than 2 times upper limit of normal
- Creatinine clearance greater than 30 mL/minute

# Phase 3 (pembrolizumab)

- ANC equal to or greater than 1.5 x  $10^9/L$  AND Platelets equal to or greater than  $50 \times 10^9/L$
- Total bilirubin less than 1.5 times upper limit of normal
- AST/ALT less than 3 times upper limit of normal
- Creatinine clearance greater than 30 mL/minute
  - Contact Physician if parameters not met

**Note:** Hepatitis B serology results must be reviewed in accordance with CCMB Policy Hepatitis B Monitoring for Oncology and Hematology Patients

# **SEQUENCE OF MEDICATION ADMINISTRATION**

Pre-treatment Requirements									
Drug Dose CCMB Administration Guideline									
Phase 2 – AC (Dose Dense)									
Instruct patient to start vigorous oral pre-hydration (600-900 mL) the morning of cyclophosphamide treatment (Self-administered at home)									

Establish primary solu	tion 500 mL of: normal salir	ne
Drug	Dose	CCMB Administration Guideline
Phase 1 – pembroliz	umab every 42 days + PA	CLitaxel (weekly) + CARBOplatin (weekly) (Cycles 1 to 4)
Phase 1 - Cycles 1 aı	nd 3 ONLY	
Day 1		
pembrolizumab	4 mg/kg	IV in normal saline 100 mL over 30 minutes  Use 0.2 or 0.22 micron filter  *Alert: pembrolizumab only administered on Cycles 1 and 3 of Phase 1
cetirizine	20 mg	Orally 1 hour prior to PACLitaxel
ondansetron	16 mg	Orally 30 minutes pre-chemotherapy
dexamethasone	20 mg	IV in normal saline 50 mL over 15 minutes <u>1 hour</u> prior to PACLitaxel  *Nursing Alert: PACLitaxel starts 1 hour after completion of dexamethasone infusion
Wait 1 hour after com	pletion of IV pre-medication	n(s) before starting PACLitaxel
PACLitaxel	80 mg/m <sup>2</sup>	IV in normal saline 250 mL over 1 hour, following the administration rates below:  • Administer at 100 mL/hour for 15 minutes, then  • Administer remaining volume over 45 minutes  Use non-DEHP bags and non-DEHP administration sets with 0.2 or 0.22 micron filter  *Alert: Gently invert bag 8 to 10 times immediately prior to administration of PACLitaxel to evenly distribute the drug
CARBOplatin	AUC 1.5 mg/mL.min; maximum dose 225 mg (see table below)	IV in D5W 250 mL over 30 minutes

Days 8 and 15									
cetirizine	20 mg	Orally 1 hour prior to PACLitaxel							
ondansetron	16 mg	Orally 30 minutes pre-chemotherapy							
dexamethasone	20 mg	IV in normal saline 50 mL over 15 minutes 1 hour prior to PACLitaxel							
		*Nursing Alert: PACLitaxel starts 1 hour after completion of dexamethasone infusion							
Wait 1 hour after com	pletion of IV pre-medication	n(s) before starting PACLitaxel							
PACLitaxel	80 mg/m <sup>2</sup>	IV in normal saline 250 mL over 1 hour, following the administration rates below:							
		Administer at 100 mL/hour for 15 minutes, then							
		Administer remaining volume over 45 minutes							
		Use non-DEHP bags and non-DEHP administration sets with 0.2 or 0.22 micron filter							
		*Alert: Gently invert bag 8 to 10 times immediately prior to administration of PACLitaxel to evenly distribute the drug

Phase 2 – pembrolizu	ımab every 42 days	+ AC (Dose Dense) every 14 days (Cycles 1 to 4)
Establish primary solut	ion 500 mL of: norma	l saline
Phase 2 - Cycles 1 and	d 4 ONLY	
pembrolizumab	4 mg/kg	IV in normal saline 100 mL over 30 minutes  Use 0.2 or 0.22 micron filter  *Alert: pembrolizumab only administered on Cycles 1 and 4 of Phase 2
aprepitant	125 mg	Orally 1 hour pre-chemotherapy
ondansetron	16 mg	Orally 30 minutes pre-chemotherapy
dexamethasone	12 mg	Orally 30 minutes pre-chemotherapy
OLANZapine	2.5 mg	Orally 30 minutes pre-chemotherapy
DOXOrubicin	60 mg/m <sup>2</sup>	IV Push over 10 to 15 minutes
cyclophosphamide	600 mg/m <sup>2</sup>	IV in normal saline 250 mL over 1 hour
Phase 2 - Cycles 2 and	d 3 ONLY	
aprepitant	125 mg	Orally 1 hour pre-chemotherapy
ondansetron	16 mg	Orally 30 minutes pre-chemotherapy
dexamethasone	12 mg	Orally 30 minutes pre-chemotherapy
OLANZapine	2.5 mg	Orally 30 minutes pre-chemotherapy
DOXOrubicin	60 mg/m <sup>2</sup>	IV Push over 10 to 15 minutes
cyclophosphamide	600 mg/m <sup>2</sup>	IV in normal saline 250 mL over 1 hour
Phase 3 usually starts	s 30 to 60 days post-	surgery
Phase 3 – pembrolizu	ımab every 42 days	(Cycles 1 to 5)
Establish primary solut	ion 500 mL of: norma	l saline
pembrolizumab	4 mg/kg	IV in normal saline 100 mL over 30 minutes  Use 0.2 or 0.22 micron filter
Maximum pembrolizun		•

In the event of an infusion-related hypersensitivity reaction, refer to the 'Hypersensitivity Reaction Standing Order'

# **REQUIRED MONITORING**

#### Hepatitis B serology

• Hepatitis B surface antigen and Hepatitis B core antibody (drawn within preceding 5 years)

## Phase 1 (pembrolizumab + PACLitaxel + CARBOplatin)

Cycles 1 to 4

#### Day 1

- CBC, serum creatinine, urea, electrolytes, liver enzymes, total bilirubin, albumin, glucose and TSH as per Physician Orders
- Cortisol at physician's discretion
- Full vital signs (temperature, heart rate, respiratory rate, blood pressure and O<sub>2</sub> saturation) at baseline and as clinically indicated
- No observation period required after pembrolizumab (Cycles 1 and 3) and PACLitaxel administration. Patient can be discharged from treatment room if stable whether they had a reaction or not

#### Days 8 and 15

- CBC, serum creatinine, urea, electrolytes, liver enzymes, total bilirubin, albumin, glucose and TSH as per Physician Orders
- Full vital signs (temperature, heart rate, respiratory rate, blood pressure and O<sub>2</sub> saturation) at baseline and as clinically indicated
- No observation period required after PACLitaxel administration. Patient can be discharged from treatment room if stable whether they had a reaction or not

#### Phase 2 (pembrolizumab + AC Dose Dense)

#### Cycles 1 to 4

- CBC, serum creatinine, urea, electrolytes, liver enzymes, total bilirubin, albumin, glucose and TSH as per Physician Orders
- Morning cortisol required prior to Cycle 4. Cortisol at physician's discretion for Cycles 1 to 3
- Left Ventricular Ejection Fraction (LVEF) monitoring is recommended at baseline and as clinically indicated
- Full vital signs (temperature, heart rate, respiratory rate, blood pressure and O<sub>2</sub> saturation) at baseline and as clinically indicated
- No observation period required after pembrolizumab administration (Cycles 1 and 4). Patient can be discharged from treatment room if stable whether they had a reaction or not

#### Phase 3 (pembrolizumab)

## All Cycles

- CBC, serum creatinine, urea, electrolytes, liver enzymes, total bilirubin, albumin, glucose and TSH as per Physician Orders
- · Cortisol at physician's discretion
- Full vital signs (temperature, heart rate, respiratory rate, blood pressure and O<sub>2</sub> saturation) at baseline and as clinically indicated
- No observation period required after pembrolizumab administration. Patient can be discharged from treatment room if stable whether they had a reaction or not

Recommended Support Medications										
Drug	Dose	CCMB Administration Guideline								
Phase 1 – pembrolizumab + PACLitaxel + CARBOplatin										
filgrastim (brand name specific) (See Filgrastim Clinical Guide)	5 mcg/kg (rounded to nearest 300 mcg or 480 mcg)	Subcutaneous once daily on Days 3 to 5, Days 10 to 12 and Days 17 to 19								
dexamethasone	8 mg	Orally once daily on Days 2 and 3, 9 and 10, and 16 and 17								
metoclopramide	10 – 20 mg	Orally every 4 hours as needed for nausea and vomiting								
Phase 2 – pembrolizui	mab + AC (Dose Dense)									
pegfilgrastim (brand name specific) (See Filgrastim Clinical Guide)	6 mg	Subcutaneous once on Day 2  *Alert: pegfilgrastim to be given as a single dose once per chemotherapy cycle no sooner than 24 hours after chemotherapy								
aprepitant	80 mg	Orally once daily on Days 2 and 3								
dexamethasone	8 mg	Orally once daily on Days 2, 3 and 4								
OLANZapine 2.5 mg		Orally the evening of Day 1 then twice daily on Days 2, 3 and 4. Also use OLANZapine 2.5 to 5 mg AS NEEDED for breakthrough nausea and vomiting (including Days 1 to 4 up to a maximum of 10 mg per day. Contact clinic if nausea/vomiting is not adequately controlled								
Phase 3 – pembrolizui	mab									
	N	lone required								

# **DISCHARGE INSTRUCTIONS**

#### Phase 1 (pembrolizumab + PACLitaxel + CARBOplatin)

- Patients should be instructed to contact their cancer team immediately if symptoms of hypersensitivity reactions occur after discharge
- Ensure patient receives filgrastim supply if patient is self-administering at home
- Instruct patient to continue taking anti-emetic(s) at home
- Confirm that patient has received the CCMB Immune Checkpoint Inhibitor Medical Alert wallet card
- · Reinforce to patient the immune-mediated adverse reactions and importance of reporting immediately
  - For severe symptoms, the patient should be instructed to go to the nearest emergency room. Oncologist should be contacted
- Reinforce applicable safe handling precautions of medications, blood and body fluids for 48 hours after completion of chemotherapy

#### Phase 2 (pembrolizumab + AC Dose Dense)

- Patients should be instructed to contact their cancer team immediately if symptoms of hypersensitivity reactions occur after discharge
- Ensure patient receives pegfilgrastim supply if patient is self-administering at home
- Instruct patient to:
  - Continue taking anti-emetic(s) at home. Patients should be instructed not to use OLANZapine and metoclopramide concurrently due to drug interactions
  - Maintain oral intake of 2000 mL (8 glasses) of fluid daily at home
  - o Empty bladder every 2 hours while awake and at bedtime for 24 hours after each dose of cyclophosphamide
  - Obtain immediate assistance as per your clinic's contact instructions if:
    - Symptoms of hemorrhagic cystitis (e.g. dysuria, hematuria)
    - Unable to drink recommended amount of fluid
- · Confirm that patient has received the CCMB Immune Checkpoint Inhibitor Medical Alert wallet card
- Reinforce to patient the immune-mediated adverse reactions and importance of reporting immediately
  - For severe symptoms, the patient should be instructed to go to the nearest emergency room. Oncologist should be contacted
- Reinforce applicable safe handling precautions of medications, blood and body fluids for 48 hours after completion of chemotherapy

## Phase 3 (pembrolizumab)

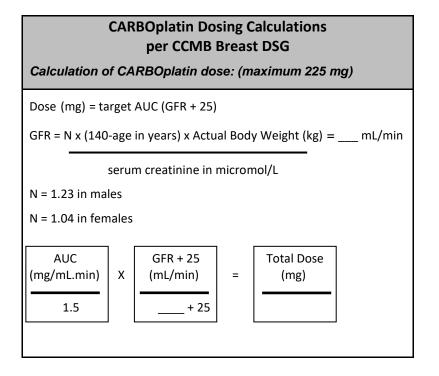

- Patients should be instructed to contact their cancer team immediately if symptoms of hypersensitivity reactions occur after discharge
- Confirm that patient has received the CCMB Immune Checkpoint Inhibitor Medical Alert wallet card
- Reinforce to patient the immune-mediated adverse reactions and importance of reporting immediately
  - For severe symptoms, the patient should be instructed to go to the nearest emergency room. Oncologist should be contacted

#### ADDITIONAL INFORMATION

- pembrolizumab is an Immune Checkpoint Inhibitor. Consult with oncologist for immune-mediated adverse reactions; corticosteroids are often indicated
- PACLitaxel may cause progressive, irreversible neuropathy
- Cumulative DOXOrubicin dose should be calculated and should not exceed 360 mg/m<sup>2</sup>. If exceeding 360 mg/m<sup>2</sup>, consideration to adding dexrazoxane should be given if patient is benefiting from DOXOrubicin therapy
- Due to the risk of reactivation of Hepatitis B virus (HBV) while on this treatment regimen, prescriber must adhere to CCMB
  Policy Hepatitis B Monitoring for Oncology and Hematology Patients for ordering and interpreting HBV serology and
  prescribing antiviral prophylaxis
- ARIA ordering:
  - Note: Upon completion of 4 cycles of BRST [pemb + BrighTNess wkly Ph 1], patients should be started on BRST - [pembro + BrighTNess Phase 2] to complete 8 cycles of neoadjuvant therapy
  - BRST [pembro + BrightNess Phase 2] should begin 7 days after Cycle 4, Day 15 of BRST [pemb + BrightNess wkly Ph 1]
  - Note: At Cycle 4 of Phase 1 and Phase 2 regimens, an entry called "Physician Reminder-PembBRIGHTNESS
    protocol timing 1 Units Insert Miscellaneous once" will appear in the electronic drug order. No action is required.
    This prompt is to remind the prescriber to order the next regimen as part of the pembrolizumab + BrighTNess
    protocol
  - Note: At Cycle 3 of BRST [pembro + BrighTNess Phase 2], an entry called "Physician Reminder -Order morning cortisol and TSH 1 Units Insert Miscellaneous once" will appear in the electronic drug order. No action is required. This prompt is to remind the prescriber to order morning cortisol and TSH with Cycle 4 bloodwork as required by surgical oncologist prior to definitive surgery
  - Note: Upon completion of neoadjuvant chemotherapy and definitive surgery, patient should be placed on
     BRST [pembro + BrightNess Phase 3]. Adjuvant treatment usually starts between 30 to 60 days after surgery

- CARBOplatin dose considerations:
  - o CCMB Breast DSG uses actual body weight to calculate GFR
  - o CCMB Breast DSG uses a maximum CARBOplatin dose of 225 mg for this regimen
  - o If calculated CARBOplatin dose differs more than 10% from prescribed CARBOplatin dose, contact the prescriber

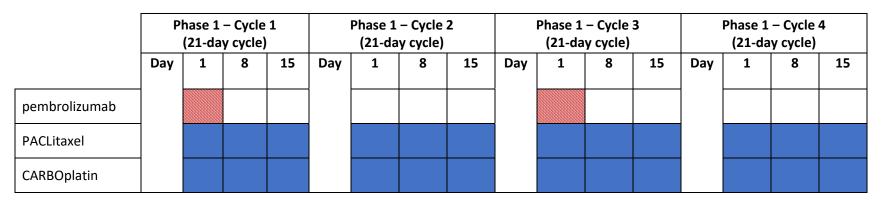

## AUC = Area Under Curve

The estimated creatinine clearance is based on limited evidence. Sound clinical judgment and interpretation of the estimation are required, because the equation above may not be appropriate for some patient populations (for example, acute renal failure).
