

RISK FACTORS: Family history suggestive of hereditary breast cancer.

LOW RISK FEATURES: 1. Diffuse nodularity, no discrete lump; 2. Mastalgia (unilateral or bilateral) without a discrete lump; 3. Nipple Discharge is not bloody or bilateral or not spontaneous

- May refer to a specialist on a non-urgent basis, if necessary. Consider non-urgent diagnostic mammogram

***DIRECT REFERRAL:** As of Feb. 2, 2015, Radiologists who perform diagnostic breast imaging (u/s or diagnostic mammography) will arrange for any required follow-up testing. (eg: image-guided biopsy)

PRACTICE POINTS: All referrals sent within 24 hrs of visit. Provide complete information as requested to avoid delays. Ensure patient and family is well informed and receives appointment information. If patient is in distress, offer referral to local counsellor, Nurse Navigator or call the Breast Cancer Navigator at the Breast Cancer Centre of Hope (pg.4.) See **Supporting Information for Clinicians** (pg 4-5) for contacts and resources. Contact the **Cancer Question Helpline for Primary Care** for assistance.

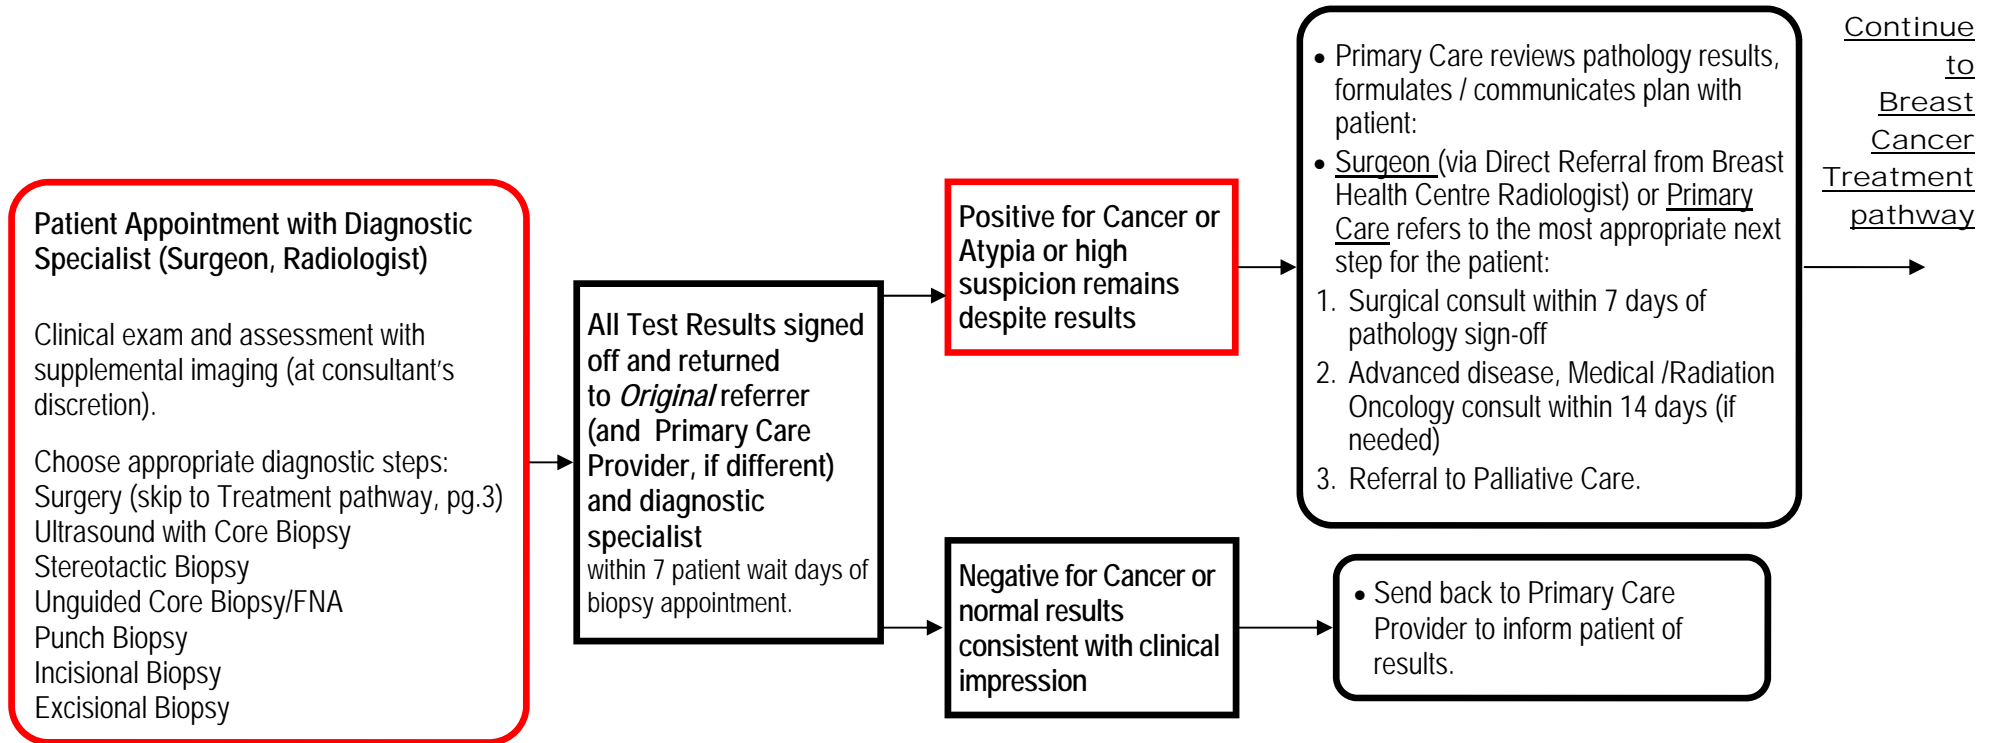

Suspicion Pathway Notes: *Unilateral nipple changes merit surgical referral even if mammogram normal.

Sixty day suspicion to first treatment timeline begins on the date of patient visit when a clinical suspicion of cancer triggers further cancer-focused investigation.

Only requisitions for patients who fit the red pathway should be noted as "urgent" to ensure urgent resources and timeline capacity can be maintained in next stages of the pathway. Pathways are subject to clinical judgement and actual practice patterns may not always follow the proposed steps in this pathway.

PRACTICE POINTS: Ensure patient is well informed and receives appointment information. Offer patients connections with psychosocial clinicians and cancer navigation services (See Supporting Information for Clinicians, pg 4-5.) Ensure the referring primary care provider is informed of results, direct referrals, and result discussions with patient.

Diagnostic Specialist appointment within 14 patient wait days of referral.

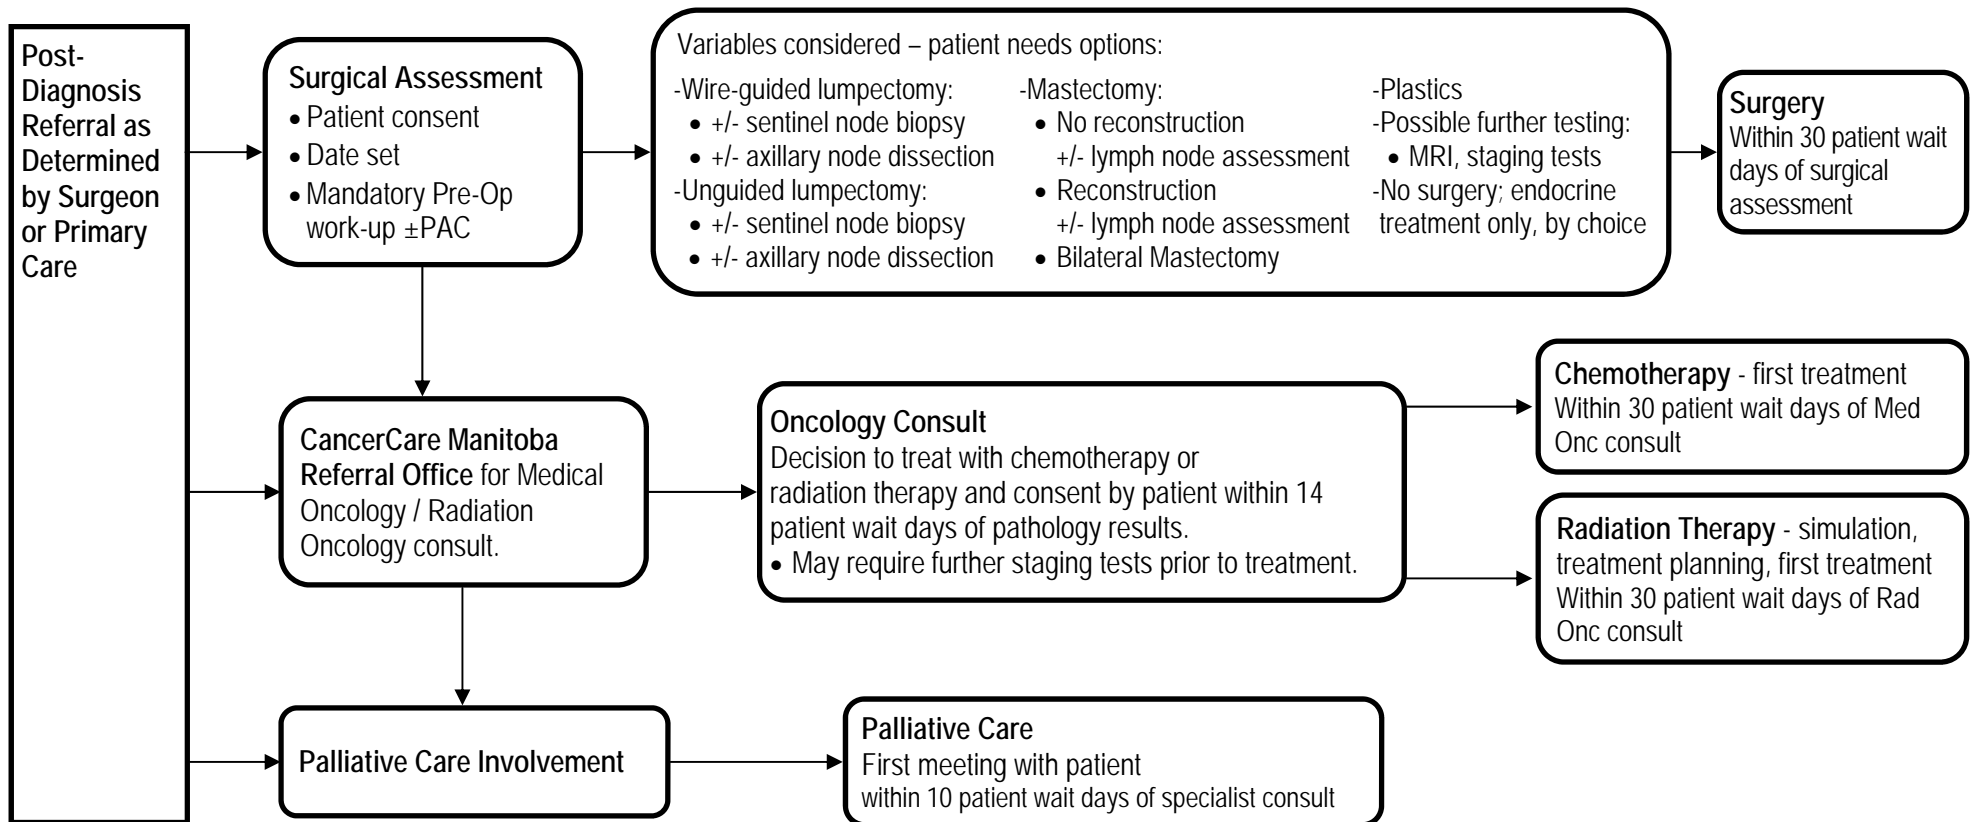

Pathology complete within 7 days of biopsy.

Surgical consult within 7 patient wait days of Pathology.

Diagnostic Pathway Notes:

Sixty day suspicion to first treatment timeline begins on the date of patient visit when a clinical suspicion of cancer triggers further cancer-focused investigation. Only requisitions for patients who fit the red pathway should be noted as "urgent " to ensure urgent resources and timeline capacity can be maintained in next stages of the pathway. Pathways are subject to clinical judgement . Patients may be moved on to next clinically appropriate step prior to "all" test results returned.

PRACTICE POINTS: Ensure Patient understands plan for first treatment. Ensure patient is well informed and receives appointment information. Offer patients connections with psychosocial clinicians and cancer navigation services (See Supporting Information for Clinicians, pg 4.) Ensure the referring primary care provider is informed of results, direct referrals, and result discussions with patient for their awareness in continued role with the patient.

In Sixty → Specialist consult to Palliative Care consult as first treatment in 10 patient wait days; to surgery, chemotherapy / radiation in 30 patient wait days or less.

Treatment Pathway Notes:

Sixty day suspicion to first treatment timeline is complete on the date of patient visit when a decided first treatment occurs, including surgery, chemotherapy, radiation, palliative care consult, or discussion with patient of clinical decision for watchful waiting.

When Do the 60 Days Begin?

The start point has been defined as clinical suspicion—the date of the patient visit when a health care provider suspects cancer and thus initiates diagnostic testing or specialist referral.

The start point can also include the date of an abnormal result from a screening test at a cancer screening program (such as BreastCheck).

A “patient wait day” includes weekend and holiday days as it refers to any day the patient is left waiting for information, discussion, tests, diagnosis and treatment, thus causing additional worry or confusion for the patient. The timeline for pathways in a cancer patient journey focus on decreasing patient wait days.

Hearing the Patient Voice

Patients involved in the improvements occurring through In Sixty have reviewed their experiences and collectively developed guidelines for health providers to better hear the voice of patients, and thus improve the patient experience.

Guidelines

Communication with patients should:

- Be individualized. Be truthful and transparent.
- Be consistent.
- Be in non-medical jargon - use simple language.
- Be quality information.
- Be caring.
- Be active, interactive and proactive.
- Be ongoing, not one time.
- Be done in an appropriate setting and context.
- Be inclusive of patients and their families.
- Be culturally competent and responsive

For a full version of the Patient Communication Principles and Guidelines, please email cancerjourney@gov.mb.ca

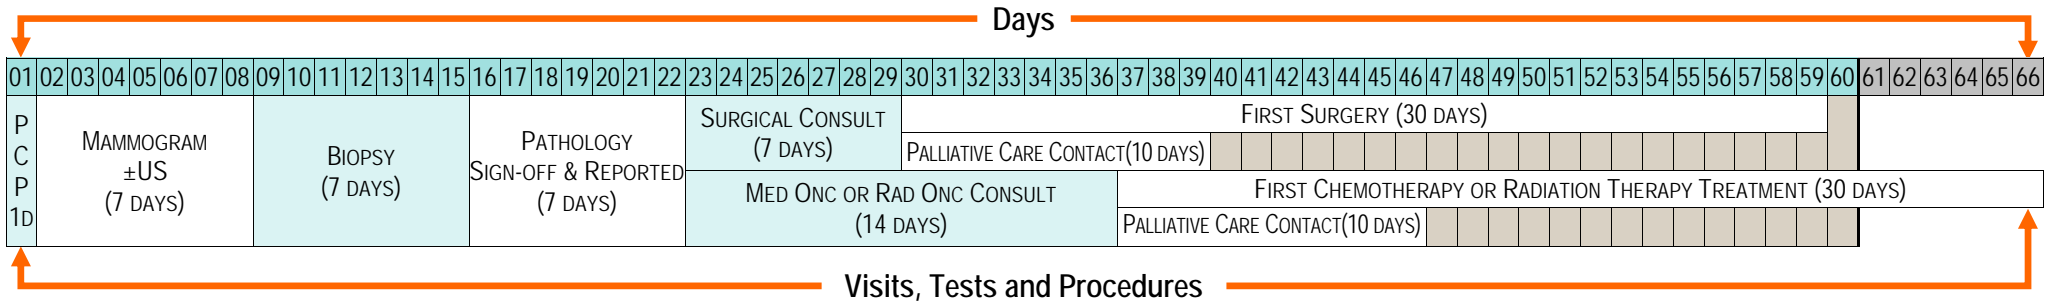

Milestones in the Breast Cancer Clinical Pathway	Timeline
1. Primary care orders diagnostic imaging work up and initiates referral to diagnostic specialist	Within 1 day of patient visit
2. Diagnostic Mammogram / Ultrasound	Within 7 days of ordered test
3. Biopsy	Within 7 days of mammogram/US
4. Pathology sign-off and reported	Within 7 days of biopsy
5. A) First Surgical Consult B) Medical Oncology or Radiation Oncology consult	Within 7 days of pathology sign-off Within 14 days of pathology sign-off
6. A) First Palliative Care consult B) First Surgery, Chemotherapy or Radiation therapy treatment	Within 10 days from consult Within 30 days from consult

Pathway Legend

- Symptoms/Results
- Urgent
- Monitor/Manage
- Semi-urgent
- Action
- Non-Urgent
- Option
- Test

Timeline Model in Manitoba for the Breast Cancer Patient Journey from Suspicion of Cancer to Treatment in Sixty Days

Milestones in the Breast Cancer Clinical Pathway	Timeline
1. Primary care orders diagnostic imaging work up or initiates referral to diagnostic specialist	Within 1 day of patient visit
2. Diagnostic Mammogram / Ultrasound	Within 7 days of ordered test
3. Biopsy	Within 7 days of mammogram/US
4. Pathology sign-off and reported	Within 7 days of biopsy
5. A) First Surgical Consult B) Medical Oncology or Radiation Oncology consult	Within 7 days of pathology sign-off Within 14 days of pathology sign-off
6. A) First Palliative Care consult B) First Surgery, Chemotherapy or Radiation therapy treatment	Within 10 days from consult Within 30 days from consult
