

RHA Screening Participation Rates

- Screening rates for women 50-69 years of age

The Program's goal is to screen 70% of the population of women 50-69 years of age every 2 years.

It takes the effort of the entire community to make a screening program successful. Here are some of the regional highlights for 2012:

- Compared to 2009-2011:
 - Regional breast screening rates decreased by **2%** (61% to 59%).
 - The population of women 50 to 69 years of age increased by **366 women** (5,376 in 2011 to 5,742 in 2013).
 - BreastCheck screened **120** more women 50 to 69 years of age (3,294 in 2009/2011 to 3,414 in 2011/2013)
- Western Medical Clinic in Brandon started direct booking with BreastCheck – this had given them the ability to book under-screened women into reserved appointments with BreastCheck. Thank you for helping to ensure women access this important screening test.
