138 of the 1241 women screened at mobile sites in the region in 2011-2012 were 70 years of age or over

RHA Screening Participation Rates

- Screening rates for women 50-69 years of age

■ Number of eligible women aged 50-69

■ Number of women screened in the past 2 years

The Program's goal is to screen 70% of the population of women 50-69 years of age every 2 years.

It takes the effort of the entire community to make mobile screening a success. Here are some of the regional highlights for 2011-2012:

- Compared to 2009-2010:
 - Regional breast screening rates increased by **1%** (58% to 59%).
 - The population of women 50 to 69 years of age increased by **146 women** (5064 in 2010 to 5210 in 2012).
 - BreastCheck screened **111** more women 50 to 69 years of age (2956 in 2009-2010 to 3067 in 2011-2012)
 - The following communities (with 50 or more women ages 50-69) increased their screening rates by 5% or more:
 - Berens River
 - Hollow Water
 - Pine Falls/Sagkeeng
 - Traverse Bay
 - Elma
 - Whitemouth
 - Hazelridge
- BreastCheck organizes and funds flights for women from select communities to get to the nearest screening location. In summer 2011, BreastCheck flew:
 - 35 women from the communities of Little Grand Rapids and Paunigassi to Winnipeg
- The Link to Pink initiatives in NEM distributed hundreds of BreastCheck shower cards and increased awareness - thank you for your support!
- We built on the success of the 2010 CBCF funded project in Sagkeeng First Nation. We were able to return to Sagkeeng to continue working with the community to increase screening rates. This visit saw an increase of 17% in the Fort Alexander post code and 8% in the Pine Falls postal code as compared with 2 years ago. Thank you to the health workers and community members in Sagkeeng who are continuing to make screening a priority.
